8205 Rose Petal Ct, Port Richey, FL 34668-6964

PROFILE

With 11+ years of experience designing, modernizing, and delivering scalable mobile applications across telecom, fintech, travel, automotive, retail, and life sciences. Specialized in **Android and iOS architecture, Kotlin, Swift, Jetpack Compose, React Native, Clean Architecture, and modular application design**, with a strong track record of building reliable, maintainable solutions for large-scale consumer applications.

Experienced in **AI/LLM integration, backend APIs, GraphQL, BLE/IoT, real-time services, mobile security, and cloud technologies**. At T-Mobile, led the modernization of the flagship T-Life application, including the migration to **Jetpack Compose**, GraphQL integration, multi-module architecture, and real-time IoT device tracking using **BLE and location frameworks**. Strong expertise in **Kotlin Coroutines, reactive data handling, and Kotlin Multiplatform (KMM)**, with a focus on performance, scalability, maintainability, and effective collaboration across engineering, product, UX, and backend teams.

WORK EXPERIENCE

Lead Android Developer 01/2024 - Present

T-Mobile

Remote

- Led a full migration from XML to Compose and built complex reusable components and Material 3 design systems.
- Integrated LLM APIs and AI agent workflows into mobile application features.
- Architected feature-based modularization to enable independent team releases and improve Gradle build performance.
- Applied scalable architectural patterns with separation of concerns across a large production application.
- Integrated speech-to-text and text-to-speech capabilities for voice-enabled mobile experiences.
- Implemented asynchronous and reactive data pipelines using Coroutines and Kotlin Flow.
- Implemented AI-driven voice interactions and conversational features.
- Integrated Apollo GraphQL for personalized offers, rewards, and efficient real-time data retrieval.
- Connected mobile AI features with backend APIs for scalable application workflows.
- Built real-time device tracking using BLE, Fused Location Provider, Google Maps, and connected-device technologies.
- Implemented OAuth 2, JWT, biometric authentication, device attestation, and Scam Shield security capabilities.

SKILLS

Android App Architecture ·
iOS App Architecture ·
Cross-Platform Mobile Architecture
Backend & API Integration ·
AI Agent & LLM Development ·
Computer Vision ·
Speech & Voice AI

EDUCATION

Bachelor of Computer Science in Software Development

Old Dominion University

2019 - 2021
Norfolk, United States

CORE SKILLS

Java · Kotlin · Swift / Swift UI ·
Python · Jetpack Compose ·
React Native · MVVM ·
Clean Architecture · REST APIs ·
PostgreSQL · GraphQL · BLE ·
IoT Integration

WORK EXPERIENCE

Senior iOS / Cross-Platform Mobile Developer

11/2021 - Present

Goldman Sachs

New York, United States

- Architected a high-frequency trading and wealth management app using React Native, TypeScript, Swift, and SwiftUI, with AI-powered capabilities integrated into the mobile experience.
- Designed modular MVVM-C architecture with Combine and Unidirectional Data Flow for complex transactions, real-time market data, and LLM-powered workflows.
- Led the migration from UIKit to SwiftUI and developed custom Swift native modules for high-performance processing and AI service integration.
- Integrated real-time WebSocket market feeds with secure financial data handling, while supporting AI-driven analysis and personalized user experiences.
- Established automated testing and CI/CD with XCTest, Jest, Detox, Jenkins, GitHub Actions, and Fastlane, integrating Python-based AI services and modern LLM APIs.

Senior Android Developer

09/2019 - 10/2021

Spirit Airlines

Seattle, Washington

- Led Android development for a consumer travel app, delivering booking, check-in, boarding, loyalty, and payment experiences using Kotlin.
- Migrated legacy Java modules to Kotlin and implemented modular, offline-first architecture with Room, Retrofit, OkHttp, and response caching.
- Built reusable UI components and modern Android interfaces with AndroidX, RecyclerView, Constraint Layout, and Jetpack Compose.
- Implemented secure mobile experiences with TLS, certificate pinning, secure tokenization, QR/boarding passes, and PCI-compliant payment flows.
- Optimized startup performance and established automated testing and CI/CD using Espresso, CircleCI, GitHub Actions, Firebase, and release smoke tests.

Android Developer

12/2017 - 08/2019

Chevrolet

Detroit, United States

- Developed connected-vehicle features integrating Android, cloud, and in-vehicle systems for telemetry, vehicle location, and remote controls.
- Built low-latency vehicle communication using REST, GraphQL, and MQTT, with offline command queuing and conflict resolution.
- Architected a modular Android application supporting multiple vehicle models and regional product variants.
- Implemented secure vehicle controls and authentication using BLE, certificate-based device authentication, and secure session handling.
- Optimized background synchronization, network calls, caching, and UI performance while reducing CPU and battery consumption.

CORE SKILLS

ADDITIONAL SKILLS

LLM APIs • AI Agent Workflows •
OpenCV • Speech-to-Text •
Text-to-Speech • voice generation •
Mobile Application Security •
OAuth 2.0 • CI / CD • AWS

INTERESTS

Future Phone Devices

I am interested in exploring how smartphones may evolve by the 2030s, including advances in artificial intelligence, flexible displays, sustainable materials and battery technology.

Machine Learning

Keep learning about modern AI techniques, model capabilities, and their practical applications across different industries.

BOOKS

The Little Mermaid
Hans Christian Andersen

The Odyssey
Homeros

WORK EXPERIENCE

Android Developer

04/2016 - 11/2017

JCPenney

Plano, United States

- Built scalable e-commerce features including paginated product catalogs, cart and checkout flows, secure payment tokenization, and personalized recommendations.
- Implemented offline caching, image optimization, and performance improvements to reduce memory leaks, ANRs, and improve scrolling and startup performance.
- Established automated testing and CI/CD with JUnit, Mockito, Espresso, and automated builds, supporting multi-flavor and white-label releases.

Android Developer

01/2015 - 03/2016

Regeneron Pharmaceuticals

Tarrytown, United States

- Developed Android research and field-operations features with secure data collection, offline synchronization, encrypted storage, and SQLite.
- Implemented secure REST API integration with Retrofit/OkHttp, role-based access controls, PHI protection, and HIPAA-aware logging.
- Built reliable field workflows with background synchronization, barcode/QR scanning, automated testing, Crashlytics, and network retry strategies.
